

The *Power* of Your Fat: *Natural* Body Contouring

AquaShape®
by HUMAN MED 

An advanced body contouring procedure that uses water-jet assisted liposuction (WAL) and fat transfer.

Body Contouring

WITH AQUASHAPE®

Many people desire a harmoniously shaped body, which cannot always be achieved by diet and exercise alone.

Whether you desire a slimmer waistline, sculpted thighs, toned arms, or a more defined silhouette overall, AquaShape® can cater to your unique aesthetic goals.

Furthermore, the high quality of the fat harvested during the liposuction allows the use of the fat for transfer to other areas of the body, adding more volume and augmentation. AquaShape® procedures are performed with water-jet assisted liposuction using the the body-jet® system.

The Power of Your Fat

NATURAL VOLUME AND CONTOURING

Fat transfer is a procedure that enables the utilization of your body's own fat as a valuable resource for contouring of various body areas without introducing foreign material into your body. Fat transfer has many advantages:

- Natural look with natural filling material
- Long-lasting results
- Regenerative cells in fat have a rejuvenating effect on the skin
- Minimal complications/ No known side effects
- No risk of allergic reactions

WHAT TO EXPECT

As one of the first steps you will have a **CONSULTATION** with your doctor to discuss your individual goals for sculpting your body to your desired shape.

In the next step of the AquaShape® procedure, the surgeon performs **WATER-JET ASSISTED LIPOSUCTION (WAL)** with the body-jet® system. This gently loosens the fat cells and simultaneously suctions them out of the body without damaging the surrounding tissue. As a result, the survival rate of the fat cells is very high.

The collected fat is now ready to be injected into the target area(s). Once the **FAT TRANSFER** has been completed, the fat starts to attach to the surrounding tissue over the next months providing a long-lasting result.

Please schedule **FOLLOW-UP APPOINTMENTS** with your surgeon to monitor healing.

ADVANTAGES OF WAL

The key advantage of the gentle WAL is its ability to preserve the integrity of surrounding tissues. The water-jet assisted technology minimizes trauma to the body, reducing the risk of bruising, bleeding, and post-procedure discomfort. This promotes a short recovery period.

Advantages

RESHAPING

Natural body shaping with your own fat

SAFE

Minimized risks during the procedure

GENTLE

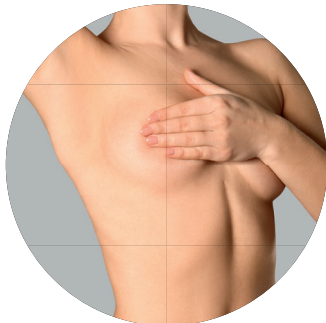

Reduced stress on surrounding tissue

LOW PAIN

Minimally invasive procedure

Aesthetic

APPLICATIONS OF FAT TRANSFER

BREAST ENLARGEMENT

Breast enlargement without implants – fat transfer within your own body makes this possible. Breast augmentation using fat transfer is especially suitable for you if you would like to add natural-looking, long-lasting fullness to your breasts without introducing foreign material into your body.

HYBRID BREAST AUGMENTATION

Fat transfer can be used as a hybrid solution for breast enlargement with synthetic implants. This makes it possible to achieve the large volume breast augmentation that synthetic implants offer while still keeping a natural look.

BUTTOCK AUGMENTATION

Should you desire a fuller and more rounded buttock area you can have your buttocks augmented with your own fat without having to use synthetic materials.

LIPOSUCTION

With the water-jet assisted liposuction (WAL) it is possible to target and remove unwanted fat deposits with maximum precision, sculpting your body to your desired shape.

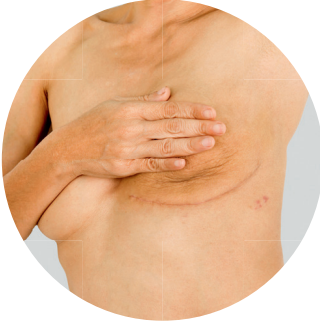

REJUVENATION

The fat tissue beneath the skin of our face and hands is essential to a youthful look. As we age, our skin loses elasticity and strength, collagen production slows, and the natural subcutaneous fat decreases. Added volume (fat tissue) rejuvenates the skin. Wrinkles are diminished. Even sunken cheeks can be „filled out“. As a result, your face or the back of your hands will look younger.

Reconstructive

APPLICATIONS FOR FAT TRANSFER

BREAST RECONSTRUCTION

Fat transfer is good alternative for you if you are looking for a natural method of breast reconstruction following breast cancer and do not want synthetic materials in your body. The advantages of this method are natural-looking breasts and long-lasting results.

SCAR TREATMENT

Fat transfer under scars that are depressed (sunken into the skin) can relieve the depression and flatten the scarred skin to normal level. Even thick and raised scars can be softened with fat transfer. The softening of the scars can make them less rigid and therefore less painful. The appearance of scars can also be significantly improved through fat transfer because the regenerative cells in the fat have a rejuvenating effect on the skin.

WOUND TREATMENT

Your fat tissue can also be used as a means to stimulate the repair of chronic, non-healing wounds. The injection of fat near the wound has been used with good results, for example, in the treatment of diabetic wounds.

COMPREHENSIVE, NATURAL BODY CONTOURING

Building on a long success story in the fields of general surgery, urology, and neurosurgery, Human Med AG started working in the areas of plastic surgery, reconstructive surgery, and regenerative medicine in 2004.

As the innovator of the medical water-jet technology, Human Med AG are leading in their field and are the world's largest manufacturer of WAL-based medical devices for liposuction.

If you have any questions about AquaShape®, the water-jet assisted liposuction (WAL), and fat transfer, please contact: info@humanmed.com.
